# 502 Bad Gateway Token

## **D502 time machine token**

D502 swap Time Machine is a DeFi project derived from 502 Bad Gateway Token (Z502) and an evolution of the Uniswap with D502 tokenomics. Unlike Z502, D502 was created to develop a DeFi project.

# What is 502 Bad Gateway Token “Z502”

Z502 is a crypto currency project born in Japan in 2018.

Z502 is targeting the world and implementing a token economy.

ANGOO  
FinTech

Listed venture company in Japan is running an exchange called ANGOO FinTech and this exchange is using Z502 as an exchange token.

D502, a token, was created to start a DeFi service from Z502.

# Decentralized Finance

Financial system today is centralized and controlled by intermediaries like the bank, brokers, lawyers and so on. However, decentralized finance, by utilizing smart contracts, does not rely on these intermediaries and allows people to use every financial service and get rewarded. For example, users can easily swap and by adding liquidity, they are able to earn transaction fees from the fund pool. Anyone can join and use DeFi services. Numbers of crypto currency projects are making announcement to join and develop their own DeFi system.

# DeFi

# D502 swap time machine

Z502 Foundation, also immediately announced the development of a DeFi system and launched a service called D502 swap Time Machine.

D502 swap Time Machine promises you to provide a service that no one has experienced.

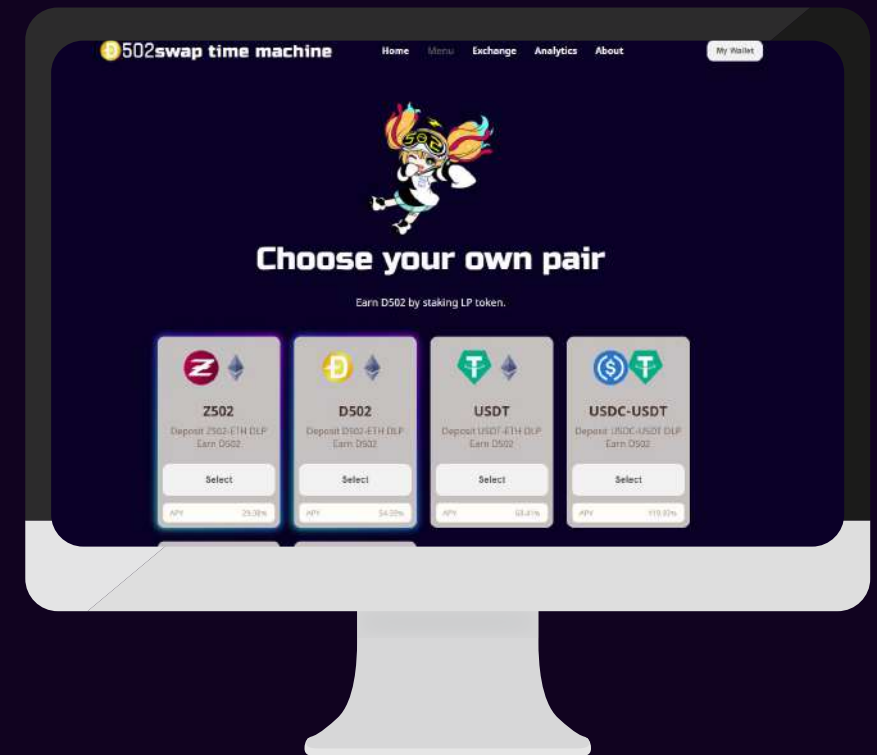

# Overview of D502 swap time machine

<https://d502.io/>

Users are able to swap the following pairs:

- Z502-ETH
- Z502-USDT
- Z502-USDC
- D502-ETH
- USDT-ETH
- USDC-USDT

Liquidity providers will earn LP token, like the Uniswap, called DLP token and by staking this DLP token, they will earn D502 based on the percentage of how much the users added liquidity to the pool. APY is displayed on

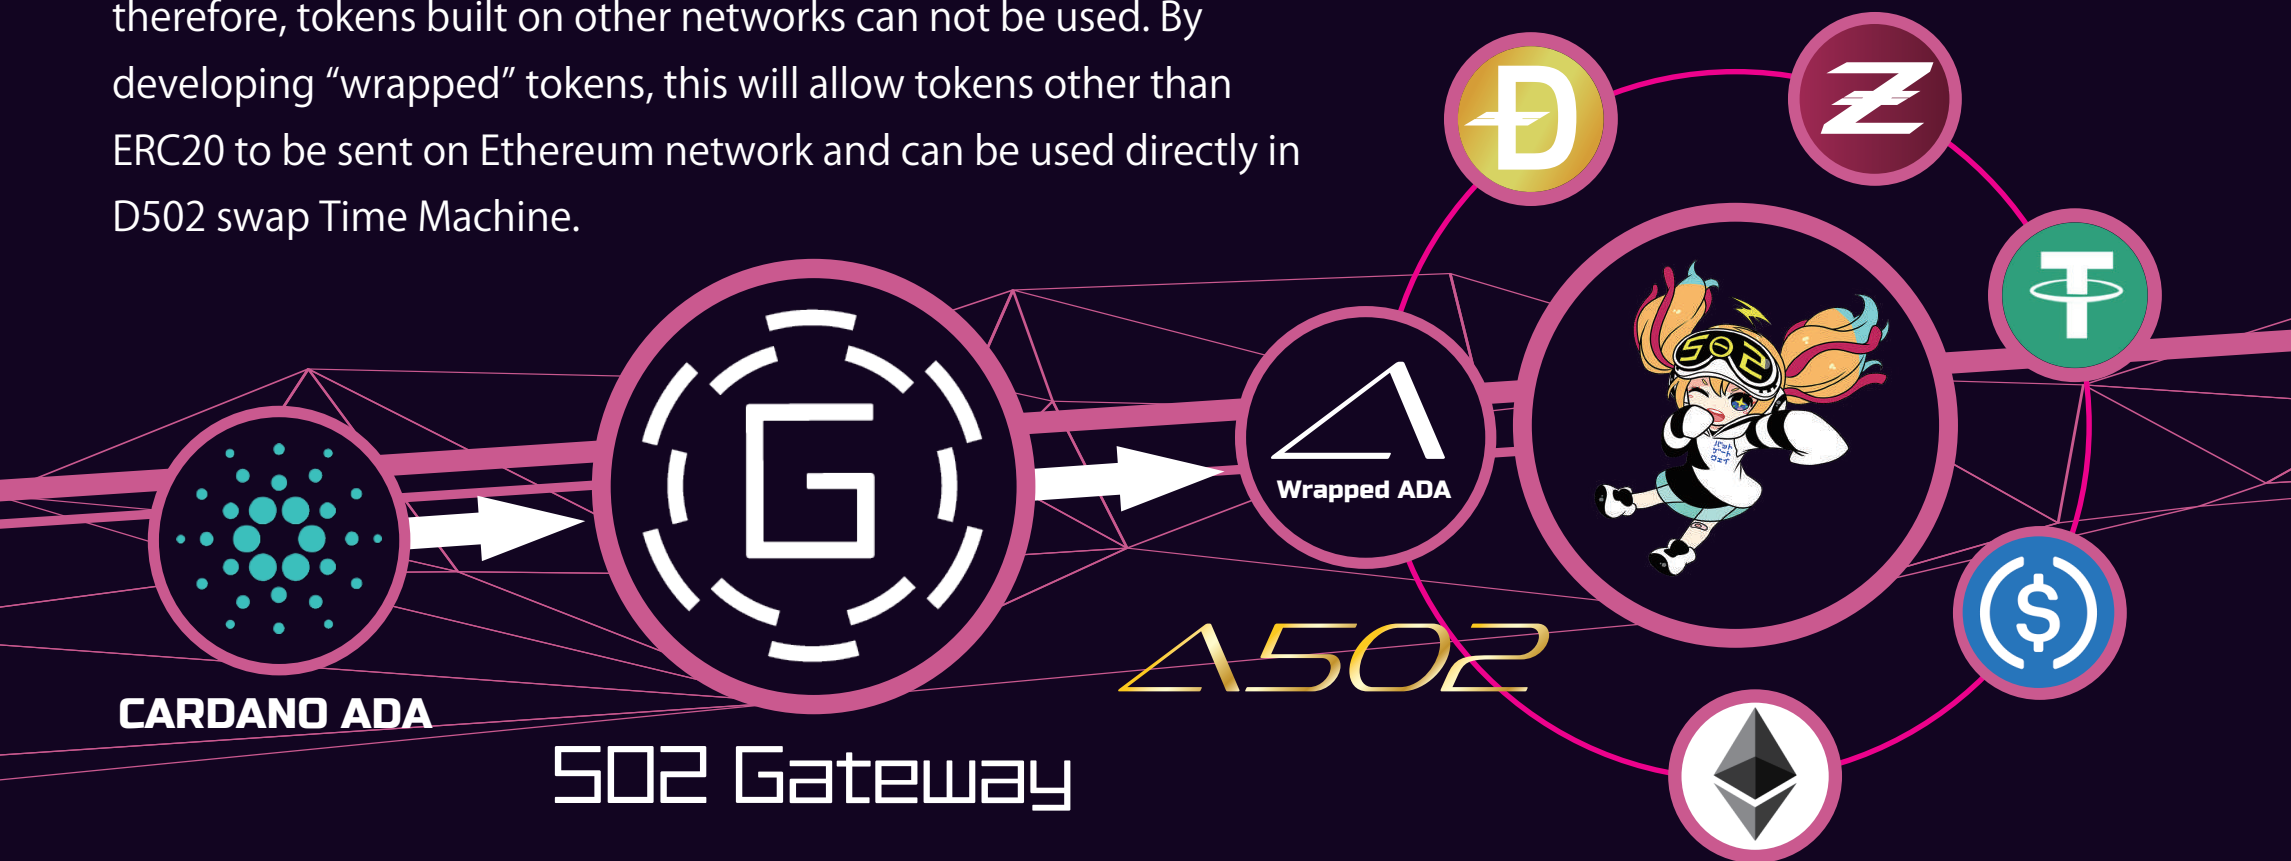

## Innovative ideas and technical innovation

D502 is now under new technical development.

Most of the DeFi is built on top of the Ethereum network and therefore, tokens built on other networks can not be used. By developing “wrapped” tokens, this will allow tokens other than ERC20 to be sent on Ethereum network and can be used directly in D502 swap Time Machine.

## D502 swap time machine

Almost every DeFi is built on top of the Ethereum network and made it impossible for other networks to get involved with DeFi. However, we developed 502Gateway to “wrap” the token to bring tokens on different blockchains to the Ethereum network. Wrapped token will be integrated into the Ethereum network and will be able to start staking or swap in D502swap Time Machine. We will first start from Cardano (ADA) and also can easily swap A502 to ADA.

# D502 swap Time Machine Plans

## 1st

Start DEX and users providing liquidity will earn rewards.  
Aiming 30% from April.

## 2nd

Start supporting BTC, ADA, XRP, and other tokens from ERC20.

## 3rd

Automatically moves users' funds to the highest yield to earn the highest return.

## 4th

Start lending service, especially B2B.

# D502 Time Machine Token Overview

- Date started

November 30, 2020

- Token type

ERC20

Utility token

- Distribution

- Please check the numbers of token supply from the D502 swap Time Machine website
- Numbers of D502 supply will continue to increase as LP tokens are being staked

- Protocol and smart contract level

D502 swap Time Machine and Uniswap share the same interface.
